COLDTEX

THE SPECIALIST IN COLDSTORE CLOTHING

FREEZER &
THERMAL CLOTHING

In harsh conditions you want to rely on the very best freezer clothing.

Our commitment to you.

Optimal protection.

Since the early 1990s, we at Cold Tex have been developing clothing that guarantees the best protection for working in extreme cold conditions. Our starting point? Optimal protection against cold and high wearing comfort. This combination has required Cold Tex a number 1 reputation in the cold storage industry; where the working conditions are harsh and wearing comfort makes all the difference.

The importance of the wearer counts.

Since the start of Cold Tex, founder and owner Arjo van Tuijl has had one goal in mind: "To offer clothing and accessories/equipment, without making concessions to the wearer's comfort".

Many years of experience and accumulated knowledge have led to a top-class collection of thermal and reefer clothing, shoes, gloves and other accessories/equipment.

Rather cooperate than deliver.

Our collection of thermal and freezer clothing is entirely developed in-house and produced in cooperation with partners who guarantee the very best quality. At Cold Tex, we truly understand the importance of our collection, but we also know that our partnership really proves itself through outstanding service. For example, we can customize the clothing if required (even the design, if you want), we relieve you of the burden of washing and cleaning and we carry out repairs. This way, we also believe to underline the sustainable nature of our commitment.

Safety first.

When designing and developing the clothing collections, Cold Tex relies on guidelines and regulations that apply to 'protective clothing against the cold' and 'protective clothing in general'. This is reflected in the certifications awarded: EN342 and EN ISO 13688. EN342 guarantees the protection and insulation value and EN ISO 13688 guarantees the quality and durability of the fabrics and materials used.

Our commitment to sustainability.

At Cold Tex, we value the importance of reusing materials. For this reason we only use fabrics that are recyclable in the production process of our thermal and cold storage/freezer clothing.

Quality without compromises.

Certified quality.

When the working conditions are extreme, it is important to rely on protective clothing that is comfortable to wear. These are the principles from which we develop and produce our thermal and freezer clothing. This philosophy is reflected in the certifications on which our clothing and footwear are tested and approved.

EN ISO 13688

Clothing certified in accordance with EN ISO 13688 meets the general requirements for protective clothing. Specific attention is paid to design (ease of use, fit and good coverage of the body), material (strong, durable, keeps its shape and colour), labelling (sizes, requirements and characteristics of use) and measurements according to European standards.

EN 342: 2017

Clothing certified in accordance with the requirements of EN342 from 2017 protects the wearer against cold working environments. A cold working environment is defined by a combination of moisture, wind and air temperatures below -5°C .

EN 511

Gloves certified to EN 511 protect hands from convective and contact cold down to -50°C . Cold-resistant working gloves must protect against both convection cold (penetrating cold) and contact cold (direct contact with cold objects).

EN ISO 20345

Safety shoes for professional use are tested according to EN ISO 20345 to protect the wearer from injuries that may occur in certain occupational sectors. They are always equipped with a steel or plastic toecap for protection against shocks.

Tips for using insulating and visibility clothing.

Perspiration and condensation have an impact on the insulation value of protective clothing. To ensure good insulation, it is important to change clothes in time and allow them to dry properly. Needless to say, damaged clothing also affects the insulating value of thermal and freezer clothing.

Do you wear high visibility clothing or signal clothing? Then it is important that the signal areas are well visible and clean. Regular washing of high visibility clothing is therefore necessary. In order to extend the life and quality of the clothing, it is important that the clothing is dried thoroughly each time. It is obvious that broken clothing does not contribute to safety and wearing comfort. Repairs and mending increase safety and extend the life of high visibility clothing.

3-star service.

We are very proud that Cold Tex customers trust the quality, protection and comfort of our thermal and freezer clothing over and over again. This is due to the distinctive quality of our thermal and freezer clothing collections. But a much-repeated added value is the service we provide. From the design and composition of a tailor-made clothing package to the care of your clothing package long after we have delivered the clothing. We call it our 3-star service.

1

Guaranteed quality. So safe!

All Cold Tex thermal and freezer clothing collections meet up to the legal requirements for working in cold conditions. EN342 applies as the standard in this regard. In the selection of outer fabrics, insulating interlayers, linings and fastenings, we only settle for the best materials. However, in addition to choosing high-quality certified materials and fabrics, the wearing comfort also determines the quality and safety of thermal and freezer clothing. It is therefore the most important starting point for our design team. Thanks to our European production facilities, we can check at any time that the quality delivered meets our strict standards.

2

A tailor-made clothing package. Tailor-made appearance.

Thanks to our own design team, we can offer a wide variety of models and colour combinations within our thermal and freezer clothing collections. However, it may be that your requirements are not met by our standard range. That is not a problem. Our design team will happily work with you to create an exclusive custom-made thermal or freezer clothing collection based on your (design) wishes. This can be done, for example, by adapting colours, unique badges or logos. Also a model adjustment is one of the possibilities. In this way, we can ensure that the recognition of your employees matches the professional image of your company.

3

Sustainable is better. Wash and repair service.

If there is one thing that has an impact on sustainability, it is the lifespan of thermal and freezer clothing. It all starts with the choice of materials and the care taken during the production process. Also the way of maintaining the clothing is very important. Drying the clothing after use provides better protection, and it is a known fact that clean clothing lasts longer. Cold Tex lends a hand in keeping your thermal and freezer clothing in good condition. We have our laundry and repair service. This way, we are in time to detect and repair your clothing. From zip to cuff, from button to tear...

Preface Arjo van Tuijl.

In the end, freezer clothing is only good when you wear it daily with pleasure.

Cold has a huge impact on people's well-being. Also on the work floor. Employees who have to carry out their work in cold conditions not only have a higher risk of illness, but also run the risk of being involved in an accident at work more quickly. The focus on improving working conditions in cold environments therefore justifiably calls for a professional approach. That is exactly what Cold Tex stands for. We take the people who work in extreme conditions more than seriously. On the one hand, this is due to the fact that I myself have worked in cold storage facilities for many years. On the other hand, I see many types of clothing and protective equipment that have been developed by people behind a computer. Hardly any account is taken of the real wishes and needs of those who work in extreme cold, every day. This is mainly reflected in the wearing comfort. Because, let's face it, a protective fabric with an insulating padding is not the greatest mark of quality. On the other hand, characteristics such as freedom of movement, moisture regulation and ease of donning and doffing are. And unfortunately you can't judge that from a picture. The best proof is therefore provided by all those people who rely on the protection and comfort of Cold Tex thermal and freezer clothing. Every single day. In the most extreme conditions.

With kind regards,
Cold Tex

Arjo van Tuijl

FREEZER CLOTHING

Collections

 till -57 °C

Classic

The Classic collection is characterised by the use of high-quality protective and insulating fabrics, translated into a practical, solid design with good wearing comfort.

From page 14

Comfort

The Comfort collection is characterised by the use of flexible fabrics and design choices that guarantee optimal wearing comfort during heavy physical activity.

From page 24

Hi-Vis

The Hi-Vis collection is characterised by its 'high visibility' standard according to European norms. The perfect combination of high-quality protection against the cold and high visibility.

From page 30

What defines the quality of thermal and freezer clothing?

Working performance decreases substantially when the working conditions are harsh. This is especially true in extreme cold, such as outdoors in winter conditions and in cold storage and freezing rooms. In addition to the risks of poor performance, the likelihood of work-related accidents and sick leave increases significantly. Employers understand very well that safe and comfortable thermal and freezer clothing not only provides good protection but also contributes to the prevention of sickness and the reduction of occupational accidents. But how do you determine the quality of thermal and freezer clothing?

Multiple protective layers

A multi-layer garment not only protects against direct cold, but also retains body heat.

Protection against moisture, water and wind

The outer layer of thermal and freezing clothing must protect against wind, rain and moisture. At the same time, moisture from the inside must be able to vaporize. For this purpose polyamide and polyester are excellent materials.

Thermal insulation

Good thermal insulation ensures that the heat produced by the body is properly retained. The density of padding indicates its insulation value.

Ventilation

In addition to heat, the body also produces perspiration. It is important that this moisture is removed and absorbed in a moisture-absorbing intermediate layer.

Finishing

Besides protective properties, it is important that thermal and freezer clothing has a long service life. This is reflected in finishing such as reinforced stitching, reinforced knee patches, high-quality zips and press-studs and extra strong collars and cuffs.

❄️ Freezer clothing

CLASSIC COLLECTION

The Classic collection is characterised by the use of high-quality protective and insulating fabrics, translated into a practical, solid design with good wearing comfort. The composition of the fabrics guarantees good protection at temperatures down to -49° and ensures good ventilation. It is no coincidence that the Classic collection is popular in environments where people have to work hard in cold conditions. The Classic collection is certified in accordance with the latest requirements of the EN-342.

ISOTHERM COLLECTION

The Isotherm collection can fulfil a function as an additional protective layer of clothing in extreme cold. At the same time, the Isotherm collection can also be worn as outerwear thanks to its attractive finish. A striking feature of this collection is the use of materials that do not or hardly 'pill', i.e. do not spread small dust particles during intensive use. Especially for use in circumstances where hygiene requires extra attention, we have developed an isothermal food version. Due to hygiene requirements, these garments do not come with pockets.

SHOES & ACCESSOIRES

The importance of warm and dry feet.

We probably don't need to explain the use and function of safety shoes to you anymore. Since the introduction of safety shoes, many industrial accidents have been prevented. Injuries caused by something heavy falling on your foot, or injuries caused by stepping on something sharp; they only occur to a limited extent nowadays.

With increasing safety at work, an important element is often forgotten. Namely, the 'well-being' of the feet. Because a closed, safe shoe that causes intense perspiration is not desirable. The same applies to a safe shoe that does not warm up enough when it is cold. Fortunately, that is the expertise of Cold Tex. And that is reflected in an extensive collection of work and safety shoes that also offer protection against the cold and moisture.

The importance of warmth

When working in cold conditions, on cold floors, the cold quickly gets into your shoes or boots through the sole. The blood vessels in your feet constrict in response and release even less heat. The result is that your feet get even colder. If this happens for a short period of time, there is nothing to worry about. But if you work in such cold conditions every day, your feet will become increasingly painful. Moreover, in the long run, other complaints will arise due to poor circulation in your feet. The importance of protective footwear, especially against the cold, is therefore not a luxury but a necessity for your health

The quality of a protective safety shoe

Good safety shoes fulfil a number of essential requirements. First of all, they should protect against falling objects or impacts with the aid of a steel or synthetic toecap. Another important element is a sturdy sole, which prevents sharp objects from penetrating your foot. Another element is the fit and preventing loose loops and straps that can get caught behind objects. However, when a safety shoe also has to protect against moisture and cold, other requirements come into play.

The sole of a cold-resistant safety shoe consists of a thick outer sole, which remains flexible in extreme cold. Furthermore, additional intermediate layers and an inner sole are applied to prevent the cold from conducting. The shaft of the shoe can be made of leather, but the use of polyamides and other synthetic materials also offer good protection against possible penetrating moisture from outside. One of the most important parts of a protective safety shoe is the applied inner material. A good shoe offers space and mobility, but also warmth. To prevent that heat from causing perspiration, breathable and highly absorbent inner materials are chosen.

Shoes & accessoires

FREEZER SHOES

The collection of freezer shoes is characterised by the use of high-quality materials. The thick outsole offers work safety through a profile that provides grip. The cold is kept out thanks to a special rubber application that remains flexible even in extreme cold. This prevents cracks that would eventually let cold air through. Some models within the freezer shoe collection are equipped with a lambskin inner lining. This keeps feet dry. The high freezer shoes are fitted with top quality lace hooks and zips for optimal comfort and to guarantee a long lifespan.

Yukon eXtreme

The revolutionary work shoe for cold storage and freezing rooms.

Cold Tex is the exclusive supplier of the Yukon eXtreme, a revolutionary shoe for cold stores and freezer rooms. The Yukon eXtreme was designed based on the experiences of users who spend hours every day in cold storage and freezer rooms.

One of the revolutionary innovations is the use of a multi-layer high-quality textile lining - instead of lambskin. It gives the shoe a more durable character, but also guarantees improved moisture regulation and therefore a greatly improved insulating effect. Furthermore, a lot of attention has been paid to an ergonomic fit, which greatly benefits the wearing comfort. For example, a newly designed heel construction and a nitrile sole that remains supple.

HEAD PROTECTION

About head protection.

At Cold Tex, head protection means providing protection against the cold. When the head is exposed to the cold for a long period of time, all kinds of health problems can occur. Blood vessels constrict in the cold. As a result, blood flows through the head more slowly, which can lead to headaches and/or migraines. It is therefore important to protect your head optimally against the cold.

Insulating effect

When choosing hats, caps and balaclavas, it is important to consider the materials used. Woolen materials provide good heat protection. However, in places where there is a lot of air movement (outdoors or in freezing rooms) the cold air will still pass through the coarse fabric. For those kind of places it is better to choose denser fabrics, such as fleese.

Wearing comfort

A hat or balaclava should not only protect against the cold, it should also provide comfort. The field of view should not be restricted and freedom of movement should not be impeded. A cap that fits too tight can cause perspiration. It is important to prevent this because perspiration can freeze. In that case this means the cure is worse than the disease.

FREEZER GLOVES

Insulator

The insulator gloves are ideally suited for order picking in cold storage and deepfreeze warehouses. The flexible model and excellent fit ensure a pleasant feeling. The excellent grip prevents cramps in the hand caused by excessive squeezing.

From page 64

Softshell

The softshell and winter gloves have been specially developed for order-pickers. The fine diamond-shaped silicone inner hand ensures pleasant wearing comfort and a firm grip on the goods or products to be picked up. The very flexible model makes it easy for you to hold your pen or device.

From page 65

Fleece

Fleece gloves and mittens are very suitable for use in cold storage and freezer rooms with low temperatures. The "grey series" of fleece gloves are windproof and have a double layer of thermofibre. The inner lining is made of soft microfibre. The contact side is made of special rubber for extra good grip.

From page 66

Leather

The collection of leather gloves is suitable for various work activities, including order-picking and driving activities (e.g. forklift and reach truck drivers). Those are strong gloves for heavy-duty use.

From page 68

Miscellaneous

Within our glove collection, we have some models that cannot easily be categorised in the other collections. We are talking about specific models with an extra reinforced protection layer against cuts or gloves that give extra cold protection.

From page 72

About gloves.

The use of gloves in work situations has become the standard. Both in situations where the hands need to be protected from blisters, abrasions and sharp objects, and in situations where hygiene and precision are important.

The biggest challenge for hand protection are situations where it is also extremely cold and/or damp. Because in addition to sustain protection from cold and moisture, it is important to maintain a good grip.

Protection against cold and moisture
Cold Tex freezer gloves are designed for optimal protection and optimal grip in extreme conditions. The gloves meet the EN511 standard and offer protection against convective cold - thanks to a close-fitting tricot wrist cuff -, contact cold - thanks to an insulating intermediate layer - and are resistant to penetrating water from outside for at least 5 minutes. Good grip is ensured by a rubber finish on the palm and fingertips.

The right glove for the job
Working for several hours in extreme cold requires a different kind of hand protection than working for a short period in a cold environment. Therefore we have an extensive range of gloves that provide optimum protection for specific tasks in specific conditions.

Gloves

GLOVES

When choosing good protective gloves, it is important to pay attention to a number of things. Grip is important. Especially in cold and damp conditions. Cold Tex has solved this by applying a flexible rubber latex layer to the palm and fingertips. In order to offer protection down to -30° , the freezer gloves are equipped with an insulation layer and warm lining. The freezer gloves also have a tough outer layer in leather, fleece, or softshell, which protects against wind and moisture.

Cut resistant gloves

Extra protection against cold and cuts.

Cut-resistant gloves offer good protection against sharp edges and cuts. Perfect in work environments where sharp objects occur. Environments where crates, bins and boxes with sharp edges are used, or waste is being processed and cutting agents are used. The Cold Tex cut-resistant gloves also offer protection against the cold, thanks to its extra-insulating Thinsulate lining and tight-fitting cuff.

PRONOMAR DRYING SYSTEMS

Start every shift warm & comfortable.

Our partner Pronomar BV supplies ingenious solutions for the drying of insulating and cold resistant workwear. Your clothing gets the careful treatment it deserves and your co-workers are ready for a new shift!

i Modular systems, suitable for every space and all types of clothing:

- Freezer suits
- Jackets and trousers
- Boots
- Gloves
- Caps and balaclavas
- Etc.

Stainless steel 304
8-year guarantee

Air volume
>200.000 l/h

Ergonomically
shaped hangers

Fast drying time

The large air volume of more than 200.000 litres per hour ensures the quick and steady drying of clothing.

Hygienic

A professional drying process removes all moist, preventing growth of bacteria, and keeps clothing fresh longer.

Extended lifetime

Drying with an internal airflow is gentle on all materials and preserves the insulation properties of clothing.

Lean & clean

The dryers offer a fixed storage space for clothing and keep dressing rooms clean and tidy.

Also available as drying lockers and cabinets.

Size chart

Determining the right size is essential for the wearing comfort of the clothing. To be sure of the right size for a perfect fit, use our size chart. Of course, it starts with the measurements of your own body or that of your co-worker. Compare these with the tables to find the right size. The tables below give two different overviews: one for men and one for women.

Guidelines for measuring.

- Do not measure yourself, let someone else do it.
- Wear light-coloured clothing when taking measurements; thicker clothing can affect the size.
- Make sure your pockets are empty.
- Measure with the tape flat against the body.
- Do not hold the measure-tape too loose or too tight.
- Do not put fingers under the measure-tape.

Men

All measured in cm	XS 42-44	S 46-48	M 50-52	L 54-56	XL 58-60	2XL 62-64	3XL 66-68

Measuring guide

1. Body length

Total body length measured from the top of the head to the ground.

2. Upper width

The body round measured at the widest part of the torso, at chest height / over the breasts.

3. Waist measurement

Circumference of the body measured at the narrowest part of the torso, at waist level.

4. Hip width

Circumference of the body measured at hip height over the widest part of the buttocks.

5. Arm length from shoulder

Measured from the shoulder point (hard bone at end of shoulder) to the wrist joint.

6. Inside leg length

Measured from the crotch along the inside leg up to the ankle.
